PocketSmartAI: Your Smart Budget & Recommendation Assistant

An AI-powered personal finance assistant for smarter everyday spending

- Helps users track income, expenses and budgets in one place.
- Uses AI to identify spending patterns and provide useful recommendations.
- Supports better financial planning through simple insights and alerts.
- Goal: make personal budgeting easier, clearer and more personalized.

Problem Statement

Many people find it difficult to manage daily finances effectively.

- Expenses are often scattered across different apps, notes or accounts.
- Users may not know where their money is being spent.
- Overspending can happen when there is no clear budget or alert system.
- Generic financial advice may not match an individual's spending habits.
- Manual tracking can be time-consuming and easy to forget

Proposed Solution

Pocket Smart AI combines budgeting, analysis and personalized recommendations.

- Users enter or import income and expense information.
- The system categorizes expenses such as food, travel, bills and shopping.
- AI analyzes spending patterns and compares them with the user's budget.
- The assistant provides personalized suggestions to control unnecessary spending.
- Users can monitor progress and adjust their budget based on insights.

Key Features

Core features designed for simple and smart money management

•Smart Expense Tracking — record and categorize daily expenses.
•Budget Planner — set monthly or category-based spending limits. •AI Recommendations — receive personalized saving and spending suggestions.
•Spending Alerts — get notified when spending approaches a limit. •Expense Insights —viewpatterns,trends and major spending categories.
•Goal Tracking — plan toward savings goals such as education, travel or emergency funds.

Benefits & Future Scope

Potential value for users and future improvements

- Makes budgeting easier for students, employees and families.
- Helps users understand spending habits and plan expenses.
- Reduces manual effort through automated categorization and insights.
- Future: voice-based expense entry and multilingual support.
- Future: personalized financial dashboards and advanced goal planning
- . • Future: integration with supported banking or payment services, with strong privacy and security controls.
- AI recommendations should be treated as guidance, not as professional financial advice.
